

ABSTRACT

A method for generating user history information of multimedia data is provided. The method includes generating usage summary information by recording frequency of usage about the feature information of the multimedia data in a feature table, generating a user history list including link information (address) of the feature table in the usage summary information, and providing a user profile information for reflecting user preference by applying those information, therefor efficiently recording the feature information of multimedia data in limited space, and providing a user-oriented multimedia service to the user.
